

Gel Memory Foam!

Delivers all the benefits of memory foam with a cooling touch.

Available on the Comforter PR501M and PR501L and the Cirrus PR508M and PR508L.

Increases air circulation!

Gel beads are infused into the memory foam to deliver a technology that creates an open cell structure to promote air movement. Heat from your body dissipates to help maintain a cool, comfortable temperature while spending hours in your lift chair.

Provides balanced support!

Gel memory foam provides a firm yet comfortable seating surface and support for your arms on the armrests. Gel memory foam is designed with extra support where you need it for just the right amount of contact.

Provides pressure relief!

Worried about pressure points? Gel memory foam may provide relief. It gently cradles your body reducing painful pressure points.
